```
method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of treating cancer and a method of inhibiting expression of a CA nucleic acids in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the
```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            닭
                                                                                                                                                                                                      The invention relates to a nucleic acid array for detecting a cancer associated (CA) nucleic acid, comprising two or more nucleic acid probes. The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound that binds to a polypeptide, an isolated antibody or its fragment which binds to a polypeptide, which is prepared by immunizing a host animal with a composition comprising the polypeptide or its antigen binding fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the antibody and a carrier, a method of screening for anticancer activity, a method of detecting a CA nucleic acid, a method of daynosing cancer, a method of treating cancer and a method of inhibiting expression of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the antibody and detecting a complex of a CA in the individual with the indi
from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene a cell. This sequence represents human cancer-associated cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid array useful for detecting cancer associated nucleic acid, comprises two or more nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-SEP-2004; 2004WO-US031617

GENERAL INFORMATION:
APPLICANT: Brett P. Monia
APPLICANT: Susan M. Freier
APPLICANT: Scott Cooper
INTILE OF INVENTION: ANTISENSE MODULATION OF
FILE REFERENCE: RTS-0250
CURRENT APPLICATION NUMBER: US/09/954,556
CURRENT FILING DATE: 2001-09-14
NUMBER OF SEQ ID NOS: 108
SEQ ID NO 28
LENGTH: 2650
TYPE: DNA
ORGANISM: Homo sapiens

RESULT 6
US-11-019-829-38
; Sequence 38, Application US/11019829
; Publication No. US20050136465A1
; GENERAL IMPORMATION:
; APPLICANT: Hoffmann-La Roche Inc.
; TITLE OF INVENTION: Novel targets for obesity from subcutaneous fat FILE REFERENCE: 22304
; CURRENT APPLICATION NUMBER: US/11/019,829
; CURRENT PILING DATE: 2004-12-22
NUMBER OF SEQ ID NOS: 146
; SOFTMARE: Patentin version 3.2
; SEQ ID NO 38
; LENGTH: 4587
; TYPE: DNA
; ORGANISM: Homo sapiens
; FEATURE:
; NAMES/KEY: fibroblast growth factor receptor 2 transcript variant 1
; LOCATION: (1). (4587)
; OTHER INFORMATION: LocusID: 2263; NM_000141

US-11-019-829-42

; Sequence 42, Application US/11019829

; Publication No. US20050136465A1

; GENERAL INFORMATION:

; APPLICANT: Hoffmann-La Roche Inc.

; TITLE OF INVENTION: Novel targets for obesity from subcutaneous fat

; FILE REFERENCE: 22304

; CURRENT PELICATION NUMBER: US/11/019,829

; CURRENT FILING DATE: 2004-12-22

; NUMBER OF SEQ ID NOS: 146

; SOFTWARE: PatentIn version 3.2

; EQ ID NO 42

; LENGTH: 4575
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: fibroblast growth factor receptor 2 transcript variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2499
